Complete Employee Onboarding Example

How Priya Nair moves from a new-hire profile to an active employee

This example follows the exact workflow implemented in the Employee Onboarding Orchestrator. It demonstrates how one employee profile drives personalized tasks for HR, IT, payroll, benefits, training, the manager, and the employee.

Employee	Priya Nair
Role	Software Engineer
Employment	Full-time
Location	Ontario, Canada (CA-ON)
Work mode	Hybrid
Manager	David Chen
Start date	Ten days from today

Final outcome: after all required tasks are completed and HR signs off, Priya's onboarding plan becomes **COMPLETED** and her employee status becomes **ACTIVE**.

1. The employee profile is the workflow input

HR creates Priya's profile. The orchestrator uses the profile instead of applying one generic checklist to every new hire.

Profile field	Value	Why it matters
Role family	Engineering	Adds engineering setup and role-relevant training.
Employment type	Full-time	Determines eligibility for payroll and benefits.
Jurisdiction	CA-ON	Selects Ontario policy, statutory deadlines, and benefit rules.
Work mode	Hybrid	Influences equipment and workplace access tasks.
Manager	David Chen	Creates direct-report manager tasks and scope.
Start date	Ten days away	Calculates deadlines, lead time, and risk.

System result: the employee record is persisted with the jurisdiction, employment type, role family, work mode, start date, and manager relationship.

2. Plan generation

When HR selects **Generate onboarding plan**, the orchestration engine evaluates the profile against approved rules and policy coverage. It creates a saved plan with owners, due dates, dependencies, service areas, and risk information.

Service area	Priya's generated work	Primary owner
Documents	Upload and verify employment and identity documents	Employee / HR
Equipment	Laptop, monitor, badge; delivery and receipt	IT / Employee
Payroll	Tax and bank setup, then verification	Employee / HR
Benefits	Ontario medical election or waiver	Employee / HR
Training	Ontario safety and security training	Employee
Manager	Buddy, agenda, access, introductions, goals	David Chen

3. HR approval is the dispatch gate

The generated plan remains under HR control until it is reviewed and approved. This prevents service teams from acting on an unreviewed plan.

Plan lifecycle: Draft → Approved → In progress → Awaiting completion approval → Completed

After HR approves the plan, the downstream workflow records are available to the appropriate service teams. Permissions are checked at every request; a manager cannot approve a plan, and IT cannot access payroll.

4. Documents

Priya signs in to the employee workspace and uploads a requested document. The request moves from **REQUESTED** to **UPLOADED**. HR then verifies it or rejects it with a reason.

Action	Status	Recorded information
HR creates requirement	REQUESTED	Document type and required flag
Priya uploads file	UPLOADED	File name, checksum, uploader, timestamp
HR accepts	VERIFIED	Reviewer and verification timestamp
HR rejects	REJECTED	Rejection reason; Priya can resubmit

5. Equipment: delivery is not receipt

IT handles the physical equipment lifecycle. For Priya's hybrid engineering role, IT assigns a laptop and other required equipment.

Equipment lifecycle: REQUESTED → ORDERED → SHIPPED → DELIVERED → RECEIVED

When IT marks the laptop as DELIVERED, the equipment task remains in progress. Priya receives a notification asking her to acknowledge receipt. Only after Priya acknowledges the item does the status become RECEIVED and the task become complete.

6. Payroll setup

Priya completes the payroll task. The workflow can move through **PENDING** → **AWAITING_TAX_FORM** → **AWAITING_BANK_DETAILS** → **READY** → **VERIFIED**.

> Sensitive values are protected. The system does not store or return raw bank account numbers or full national identifiers. It stores safe masked information such as the last four digits and an opaque token.

7. Benefits enrolment

Because Priya works in Ontario and is a full-time employee, the system presents the eligible Ontario benefit plan. She can elect or waive it, and the selection is recorded with the jurisdiction and enrollment status.

The system refuses cross-jurisdiction selections. A UK-only plan cannot be selected for an Ontario employee, and contractors or unsupported jurisdictions are not silently treated as eligible.

8. Training

The training service assigns courses based on jurisdiction and role. Priya receives Ontario Occupational Health and Safety Awareness and Information Security Fundamentals. The training state progresses from ASSIGNED to IN_PROGRESS to COMPLETED, with deadlines and completion recorded.

9. Manager tasks

David Chen sees Priya because she is his direct report. He cannot access unrelated employees. His tasks include assigning a buddy, preparing the day-one agenda, scheduling introductions, approving system access, and setting probation goals.

10. Dependencies, notifications, and audit history

The dependency engine controls the order of work. For example, equipment cannot be completed before delivery and employee receipt.

Dependency	Why it exists
HR approval → service actions	Prevents work on an unapproved plan.
Delivery → employee receipt	Delivery is not proof that the employee received the item.
Payroll submission → verification	Reviewer needs the employee's completed setup.
All required tasks → final approval	HR must review the completed journey before activation.

Notifications are created for meaningful events:

Document submitted, equipment delivered, equipment receipt required, payroll ready, benefit election completed, training completed, manager task completed, and blocked or overdue work.

Audit history records:

Plan approval, document upload and verification, equipment status changes, payroll verification, benefit decisions, training completion, manager actions, and final sign-off.

11. Final completion

When all required work is completed or explicitly skipped, the plan changes to **AWAITING_COMPLETION_APPROVAL**. HR reviews the full journey, checks for blocked tasks, and performs final completion approval.

Final result: the plan becomes **COMPLETED**, Priya's employee status becomes **ACTIVE**, and the onboarding journey is fully auditable.

Complete journey summary

Step	Result
1. Profile	Priya's role, location, employment, work mode, start date, and manager are saved.
2. Generate	The orchestrator creates a personalized six-area plan.
3. Approve	HR approves before service work is dispatched.
4. Execute	Documents, equipment, payroll, benefits, training, and manager tasks are completed by the right people.
5. Verify	Dependencies, permissions, notifications, and audit records enforce the workflow.
6. Finish	HR gives final approval; plan is completed and Priya becomes active.
